replication initiation protein rep [similarity] - Bacillus subtilis plasmids
N.Contains: DNA ligase (EC 6.5.1.-); DNA lyase (EC 4.2.99.-)
C;Species: Bacillus subtilis
C;Species: DoMar-1994 #text_change 09-Jul-2004
C;Accession: A49783; S70201
R;Hara, T.; Nagatomo, S.; Ogata, S.; Ueda, S.

ABRC Stock Number CS801460, T-DNA left border flanking sequences o
Syngenta Arabidopsis Insertion Library (SAII) lines are available
through the Arabidopsis Biological Resource Center (ABRC).
Single contiguous sequences.
Class: TDNA tagged.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        81

/note=="Organ: limbs; Vector: pBluescript II KS(+); Site_1:
/note=="Organ: limbs; Vector: pBluescript closes: CDNA
synthesis was intilated using an oligo(dT) primer, using
methylated C in the first strand reaction, double-stranded CDNA
was blunted, ligated to NotI adapters, digested with
ECORI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., pNAS
(1994) 91: 9228-9212 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."
